AI ANSWERS HAVE A SHELF LIFE.

StillTrue.

Answers age.
Evidence should travel with them.

Claim-level freshness checks.
Official sources. Visible uncertainty.

BIFROST × TAVILY

A confident answer can outlive the rule.

The person reading it is about to make a decision.

THE QUESTION BEHIND THE QUESTION

“Can I still act on this?”

01 **Money**
Thresholds, rates, allowances

02 **Paperwork**
Eligibility, fees, deadlines

03 **Software**
Versions and deprecations

One answer in.
A clear report out.

01

Paste

Bring the answer. Choose a topic. Mask common personal details.

02

Check

Extract actionable claims. Retrieve and read official evidence.

03

Decide

Inspect the verdict, copied quote, source and retrieval time.

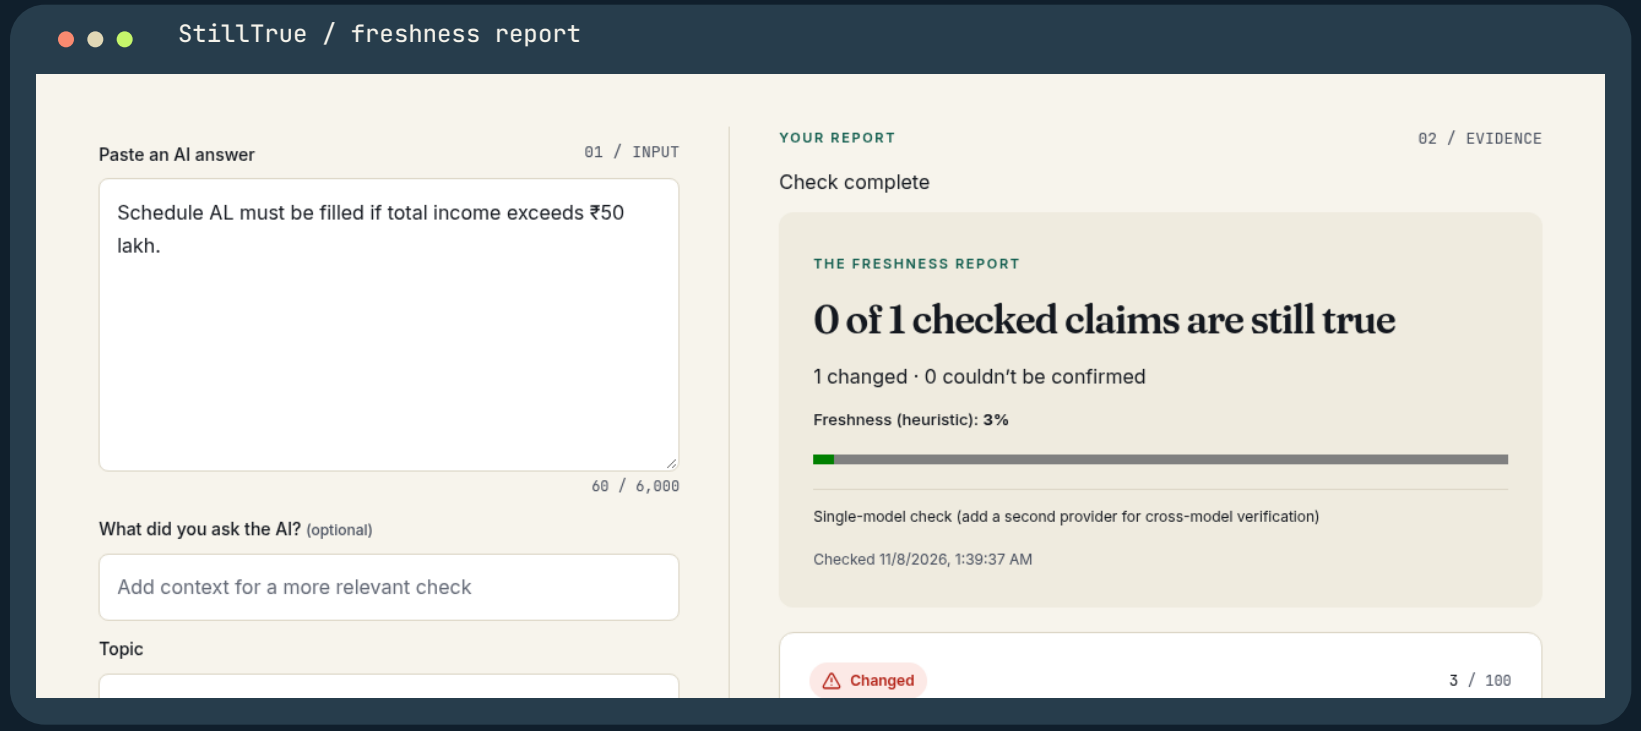

STILL TRUE

! CHANGED

? UNCONFIRMED

Evidence you can actually inspect.

A working interface. A visible boundary between demo and live evidence.

REAL SCREENSHOT · MOCK DATA

01 / STREAM

Claim results as checks finish

02 / INSPECT

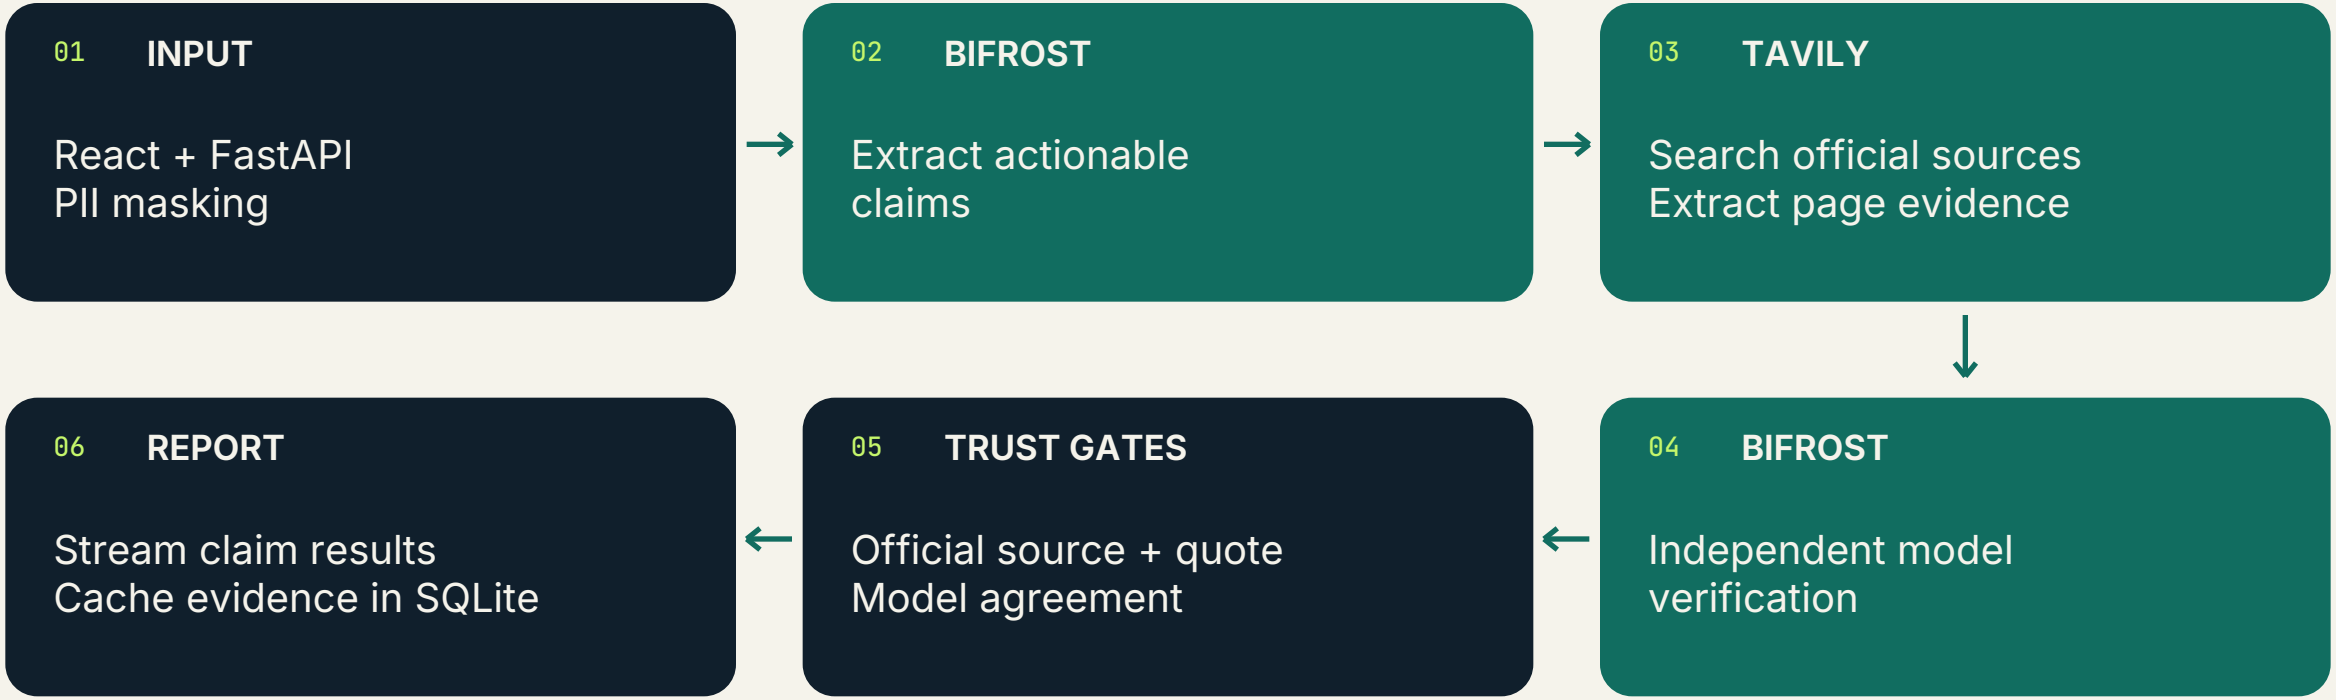

Source, quote and uncertainty

03 / REVIEW

Original answer stays visible

Two technologies. Distinct jobs.

Bifrost handles models. Tavily finds evidence. Code enforces the verdict rules.

Uncertainty is a product feature.

A false “Current” is worse than “Couldn’t confirm.”

01

Authority first.

No approved official source? No definitive verdict.

02

Show the quote.

A copied quote must exist in the cited official evidence.

03

Disagreement.

If independent checks disagree, the claim stays Unconfirmed.

Built. Tested. Clearly bounded.

17

BACKEND TESTS PASSED

7

FRONTEND TESTS PASSED

12

LAYOUT / THEME RUNS PASSED

✓ **Lint / TypeScript / Production build / Docker startup / Dependency audits**

Local engineering checks. Live verification accuracy and benchmark results: not yet measured.

Before you act, check the answer.

For people making decisions.
For developers shipping AI answers.

ONE ENGINE. WEB + DEVELOPER API.

Start with actionable claims.
Expand source coverage with evidence.
