StillTrue

Check whether what your AI just told you is still true today.

Global AI Hackathon 2026 · Bifrost × Tavily

Still true

Changed

Couldn’t confirm

INSERT REAL: team name and presenter names

Source: Project design / implementation; live checks pending

An AI told a taxpayer to fill a form. The rule had changed.

Schedule AL income threshold (as reported)

₹50 lakh ⟶ ₹1 crore

He caught it only because he already knew.

Source: Business Today, July 2026 (reported case); Income Tax Department

People act on AI answers about money. Companies own their bots' words.

≈28 million

UK users of AI money guidance (Lloyds).

Half of 500

Accountants knew businesses harmed by wrong AI advice (Dext).

CAD 812.02

Chatbot policy fabrication. Different failure; same liability lesson.

Source: TechRadar reporting Lloyds / Dext research; FAnews on Moffatt v Air Canada

The live web is stale too.

Which source should an answer rely on? StillTrue prioritizes official evidence.

INSERT REAL: official Income Tax page screenshot, ₹1 crore

INSERT REAL: secondary guide screenshot, ₹50 lakh

INSERT REAL: capture dates for both source screenshots

Source: Income Tax Department; TaxBuddy guide; capture date missing

Five steps, official sources first.

Verdict + evidence + date

INSERT REAL: Changed card values, quote and source from a verified run

No official source = Couldn’t confirm.

Source: Project design / implementation; live checks pending

Watch it catch the change.

A normal chatbot answer

INSERT REAL: captured answer text, model name and capture date

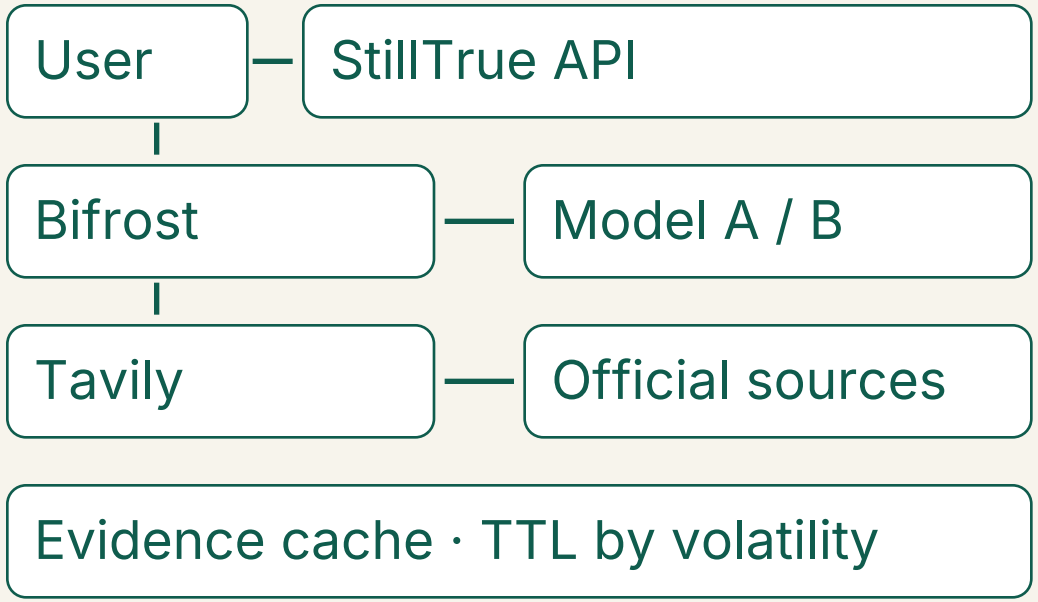

With StillTrue

INSERT REAL: screen recording of a real run, or verified live demo URL

INSERT REAL: Recorded run · date · models

Source: Project design / implementation; live checks pending

Built on both sponsors, and measured.

Tavily: planned · Bifrost: planned

INSERT REAL: benchmark chart; run make bench with real keys

Source: Project design / implementation; live checks pending

From one checked claim to a trusted layer for AI answers.

Who uses it

People: free path. Developers: API / gateway.

Next 30 days

More packs. Browser extension. Team audit logs. Planned.

Honest limits

Official sources can lag. Models can err. Not professional advice.

He caught it because he knew. Everyone else shouldn’t have to.

Source: Project design / implementation; live checks pending

Backup: landscape and Q&A

StillTrue design: official-first, dated evidence, cross-model, web + API.

Verity	Chrome / MCP; CURRENT / OUTDATED verdicts
jev	Claim checks: supported / contradicted / unverifiable
402oracle	Paid claim and URL freshness checks

Search chat? Sources can age.

Real vs demo? Clearly labelled.

False verdicts? Quotes + gates.

No source? Unconfirmed.

Cost? Quotas; no billing claims.

Privacy? Mask; avoid secrets.

Source: Verity listing (not tested by us); jev listing (not tested by us); 402oracle listing (not tested by us); Project design / implementation; live checks pending

Backup: privacy and limits

Models via Bifrost	Masked claims and evidence go to configured providers.
Tavily	Derived search queries and official URLs are sent.
Storage	Temporary jobs in memory; evidence cache on disk.
Limits	Masking can miss PII. Sources and models can err.

Not legal, tax or financial advice.
