StillTrue.

Answers age.
Evidence should travel with them.

Check whether an AI answer is still true today -
claim by claim, against official sources.

BIFROST + TAVILY / ONE COMBINED PROJECT

A confident answer can outlive the rule.

THE MOMENT THAT MATTERS

“Can I still act on this?”

An allowance. A filing deadline. An entry requirement.

The user is not a researcher.

They are about to make a decision.

A plausible answer and a list of search links do not resolve freshness.

OUR WEDGE: verify actionable facts, then expose the evidence and uncertainty.

One answer in. A claim-level report out.

01 / PASTE

Bring the answer

Choose the topic. Common personal identifiers are masked by default.

02 / CHECK

Find the evidence

Extract actionable claims, search approved domains, read the source.

03 / DECIDE

See what holds up

Verdicts, copied quotes, retrieval dates and transparent uncertainty.

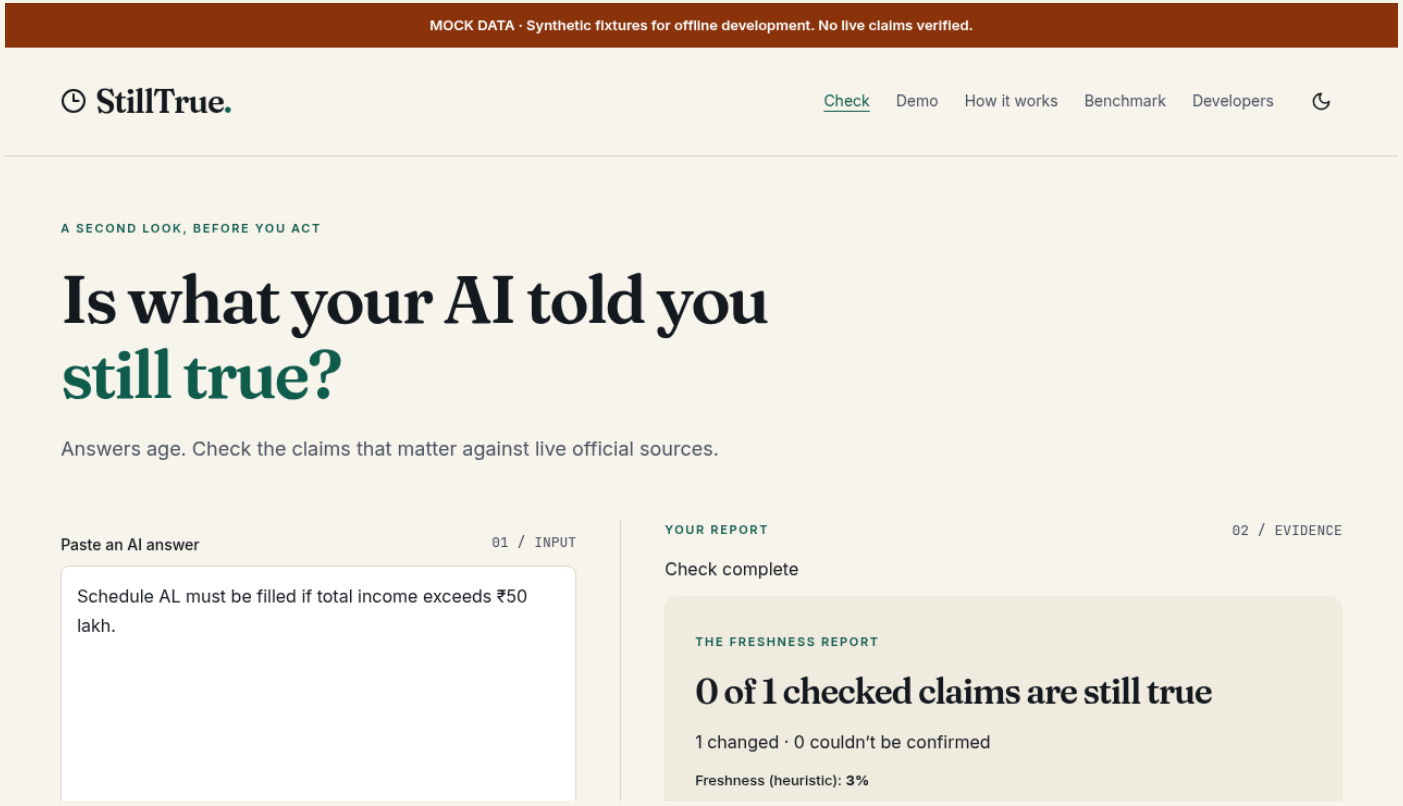

STILL TRUE

CHANGED

UNCONFIRMED

A freshness score is a heuristic - not a probability of truth.

Built to make evidence inspectable.

REAL SCREENSHOT · MOCK DATA

- Streaming claim results
- Quotes and source provenance
- Annotated original answer
- Responsive light / dark modes

Synthetic fixture results.
Live provider validation is pending.

Two technologies. Distinct jobs.

INPUT + PRIVACY

React / FastAPI / PII masking

>

BIFROST

Claim extraction + model gateway

>

TAVILY

Official-domain search + page extraction

v

SSE results back to the user

<

DETERMINISTIC GATES

Official source + quote + agreement

<

BIFROST

Independent evidence verification

SQLite caches evidence, not pasted answers. Verification still runs on cache hits.

Uncertainty is a product feature.

01

Official evidence, or no definitive verdict.

Secondary sources can add context; they cannot establish Current or Changed.

02

A quote must exist in its cited source.

We check quote provenance before accepting a model's conclusion.

03

Disagreement stays visible.

Different-provider checks can flag disagreement. A single-model mode is explicitly labelled.

EXECUTION EVIDENCE

Working software. Measured honestly.

17

BACKEND TESTS PASSED

7

FRONTEND TESTS PASSED

12

LAYOUT / THEME RUNS

PASS / Lint · TypeScript · Production build · Docker startup · Dependency audits

6 widths × 2 themes; mock runs, keyboard checks and no page errors.
These are engineering checks - not live accuracy or benchmark results.

A freshness layer wherever AI answers travel.

Start with people.
Extend through the API.

Personal decisions today.
Response annotations for developers next.
A potential usage-based service to validate.
